

Fund strategy

Fund invested in international equities with an active management. The management is close to the MSCI World with country/sector deviations explained and monitored thanks to a top-down approach. The stock selection is made mainly by a bottom-up approach. The fund can be invested up to 40% in emerging markets and up to 50% in small and medium companies. The fund has a currency hedge policy to the reference currency, by hedging at least 90% of foreign currencies.

Comments

Equities continued their rally in April, supported by the prospects for deconfinement, a V-shaped recovery and massive support from central banks and governments. The recovery in oil prices also eased financial markets. The stock market rebound is a classic one.

The results of 1Q20 were lower (-15%) than estimated, but 2Q20 will turn out to be dramatic with a fall in the United States and Europe of around 45%; however, if there is no deadly 2nd pandemic wave, investors seem to be integrating 2T20 and looking towards 2021. The discovery of a vaccine would obviously be excellent news; governments and pharmaceutical / biotechnology groups are doing everything they can to accelerate the discovery, production and distribution of a vaccine.

After overweighting the defensive sectors in the correction, we increased the weighting of the Value / Cyclical sectors. We bought Chevron, Total, Volkswagen, Adidas, Delta Airlines, Yum Brands, Bank of America and Citigroup.

We remain alert to negative themes that could appear such as inflation, protectionism, a new trade and technological war between the United States and China or a slippage in the presidential campaign between Donald Trump and Joe Biden.
